<b>1</b>	<b>Specs</b>	<b>4</b>
<b>2</b>	<b>Glossary</b>	<b>5</b>
2.1	Specialized registers . . . . .	5
2.2	Operands . . . . .	5
2.3	Opcodes . . . . .	6
<b>3</b>	<b>Status register</b>	<b>7</b>
<b>4</b>	<b>Instructions</b>	<b>8</b>
4.1	HALT - Halt . . . . .	8
4.2	NOP - No operation . . . . .	9
4.3	MOVR - Move to register . . . . .	10
4.4	MOVM - Move to memory . . . . .	11
4.5	MOVRR - Move register to register . . . . .	12
4.6	MOVRRM - Move register to memory . . . . .	13
4.7	MOVMR - Move memory to register . . . . .	14
4.8	MOVRRP - Move register pointer to register . . . . .	15
4.9	MOVRROR - Move register pointer + offset to register . . . . .	16
4.10	LOAD - Load buffer . . . . .	17
4.11	LOADR - Load buffer . . . . .	18
4.12	LOADM - Load buffer . . . . .	19
4.13	STORE - Store buffer . . . . .	20
4.14	STORER - Store buffer . . . . .	21
4.15	STOREM - Store buffer . . . . .	22
4.16	POP - Pop . . . . .	23
4.17	PUSH - Push . . . . .	24
4.18	PUSHR - Push register . . . . .	25
4.19	ADD - Add . . . . .	26
4.20	ADDR - Add register . . . . .	27
4.21	SUB - Subtract . . . . .	28
4.22	SUBWR - Subtract register from word . . . . .	29
4.23	SUBR - Subtract register . . . . .	30
4.24	MULT - Multiply . . . . .	31
4.25	MULTR - Multiply register . . . . .	32
4.26	DIV - Divide . . . . .	33
4.27	DIVWR - Divide word by register . . . . .	34
4.28	DIVR - Divide registers . . . . .	35
4.29	INC - Increment . . . . .	36
4.30	DEC - Decrement . . . . .	37
4.31	LSF - Left shift . . . . .	38
4.32	LSFR - Left shift by register . . . . .	39

4.33 RSF - Right shift . . . . .	40
4.34 RSFR - Right shift by register . . . . .	41
4.35 WLSF - Wrapping left shift . . . . .	42
4.36 WLSFR - Wrapping left shift by register . . . . .	43
4.37 WRSF - Wrapping right shift . . . . .	44
4.38 WRSFR - wrapping right shift by register . . . . .	45
4.39 AND - Bitwise AND . . . . .	46
4.40 ANDR - Bitwise AND by register . . . . .	47
4.41 OR - Bitwise OR . . . . .	48
4.42 ORR - Bitwise OR by register . . . . .	49
4.43 XOR - Bitwise XOR . . . . .	50
4.44 XORR - Bitwise XOR by register . . . . .	51
4.45 NOT - Not . . . . .	52
4.46 BRBS - Branch if bit set . . . . .	53
4.47 BRBC - Branch if bit clear . . . . .	54
4.48 BREQ - Branch if equal . . . . .	55
4.49 BREQR - Branch if equal register . . . . .	56
4.50 BREQRW - Branch if equal register and word . . . . .	57
4.51 BREQRR - Branch if equal registers . . . . .	58
4.52 BRNQ - Branch if not equal . . . . .	59
4.53 BRNQR - Branch if not equal register . . . . .	60
4.54 BRNQRW - Branch if not equal register and word . . . . .	61
4.55 BREQRR - Branch if not equal registers . . . . .	62
4.56 BRLT - Branch if less than . . . . .	63
4.57 BRLTR - Branch if less than register . . . . .	64
4.58 BRLTRW - Branch if less than register and word . . . . .	65
4.59 BRLTRR - Branch if less than registers . . . . .	66
4.60 BRGT - Branch if greater than . . . . .	67
4.61 BRGTR - Branch if greater than register . . . . .	68
4.62 BRGTRW - Branch if greater than register and word . . . . .	69
4.63 BRGTRR - Branch if greater than registers . . . . .	70
4.64 BRLTE - Branch if less than or equals . . . . .	71
4.65 BRLTER - Branch if less than or equals register . . . . .	72
4.66 BRLTERW - Branch if less than or equals register and word . . . . .	73
4.67 BRLTERR - Branch if less than or equals registers . . . . .	74
4.68 BRGTE - Branch if greater than or equals . . . . .	75
4.69 BRGTER - Branch if greater than or equals register . . . . .	76
4.70 BRGTERW - Branch if greater than or equals register and word . . . . .	77
4.71 BRGTERR - Branch if greater than or equals registers . . . . .	78
4.72 JMP - Jump . . . . .	79
4.73 CALL - Call subroutine . . . . .	80
4.74 CALLR - Call subroutine from register . . . . .	81
4.75 RET - Return from subroutine . . . . .	82

# 1 Specs

- 32-bit architecture
- 8 32-bit general purpose registers
- Variable sized memory
- Variable sized display
- Variable sized hard drive

## 2 Glossary

### 2.1 Specialized registers

- **PC** (32-Bit): Program Counter
- **SP** (32-Bit): Stack pointer
- **FP** (32-Bit): Frame pointer
- **ACC** (32-Bit): Accumulator
- **SR** (32-Bit): Status register

### 2.2 Operands

- **S**: Stack
- **R** (32-Bit): Register
- **Ro** (32-Bit): Origin register
- **Rd** (32-Bit): Destination register
- **R0** (32-Bit): Lowest general purpose register
- **Rx** (32-Bit): Highest general purpose register
- **Rs** (32-Bit): Status register
- **Sb** (8-Bit): Bit in status register
- **S0**: Lowest bit in status register
- **Sx**: Highest bit of status register
- **M** (32-Bit): Memory address
- **M0** (32-Bit): Lowest memory address
- **Mx** (32-Bit): Highest memory address
- **Mo** (32-Bit): Origin memory address
- **Md** (32-Bit): Destination memory address
- **k** (32-Bit): Constant memory address
- **K** (32-Bit): Constant

## 2.3 Opcodes

<i>Instruction</i>	<i>Parameter 1</i>	<i>Parameter 2</i>	<i>Parameter n</i>
xxxx xxxx	aaaa aaaa	bbbb bbbb	nnnn nnnn

### 3 Status register

						<b>O</b>	<b>Z</b>
--	--	--	--	--	--	----------	----------

#### **Z - Zero flag:**

- If the result of an operation is zero, the zero flag is set.

#### **O - Overflow flag:**

- If the result of an operation is too large to fit in 32-Bit, the overflow flag is set.

## 4 Instructions

### 4.1 HALT - Halt

**Description:**

Halts the program.

**Operation:**

None

**Syntax**

HALT

**Operands**

None

**Program counter**

None

**Opcode:**

1111 1111			
-----------	--	--	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

## 4.2 NOP - No operation

### Description:

Does nothing.

### Operation:

None

### Syntax

NOP

### Operands

None

### Program counter

PC + 1 → PC

### Opcode:

0000 0000			
-----------	--	--	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

### 4.3 MOVR - Move to register

**Description:**

Moves value  $K$  into register  $Rd$ .

**Operation:**

$K \rightarrow Rd$

**Syntax**

MOVR  $K$ ,  $Rd$

**Operands**

$0 \leq K \leq 2^{32} - 1$

$R0 \leq Rd \leq Rx$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0001 0000	KKKK KKKK	dddd dddd	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

## 4.4 MOVM - Move to memory

### Description:

Moves value  $K$  into memory location  $k$ .

### Operation:

$K \rightarrow k$

### Syntax

MOVM  $K, k$

### Operands

$0 \leq K \leq 2^{32} - 1$

$M0 \leq k \leq Mx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0001	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.5 MOVRR - Move register to register

### Description:

Moves value from register  $R_o$  into register  $R_d$ .

### Operation:

$R_o \rightarrow R_d$

### Syntax

MOVRR  $R_o$ ,  $R_d$

### Operands

$R0 \leq R_o, R_d \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0010	0000 0000	dddd dddd	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.6 MOVRM - Move register to memory

### Description:

Moves value from a register  $R_0$  into memory location  $k$ .

### Operation:

$R_0 \rightarrow k$

### Syntax

MOVRM  $R_0$ ,  $k$

### Operands

$M_0 \leq k \leq M_x$

$R_0 \leq R_o \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0011	0000 0000	kkkk kkkk	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.7 MOVMR - Move memory to register

### Description:

Moves value from memory location  $k$  into register  $Rd$ .

### Operation:

$k \rightarrow Rd$

### Syntax

MOVMR  $k, Rd$

### Operands

$M0 \leq k \leq Mx$

$R0 \leq Rd \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0100	kkkk kkkk	dddd dddd	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.8 MOVRPR - Move register pointer to register

### Description:

Moves a value from memory location  $R_0^*$  into register  $R_d$ .

### Operation:

$R_0^* \rightarrow R_d$

### Syntax

MOVRPR  $R_0, R_d$

### Operands

$R_0 \leq R_0, R_d \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0111	0000 0000	dddd dddd	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.9 MOVROR - Move register pointer + offset to register

### Description:

Moves a value from memory location  $R_0^* + K$  into register  $R_d$ .

### Operation:

$R_0^* + K \rightarrow R_d$

### Syntax

MOVROR  $R_0$ ,  $K$ ,  $R_d$

### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_0, R_d \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 1000	0000 0000	KKKK KKKK	dddd dddd
-----------	-----------	-----------	-----------

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.10 LOAD - Load buffer

### Description:

Copys a byte buffer from device at  $R_o^*$  to memory range  $k$  to  $k + R$ .

### Operation:

$R_o^* \rightarrow k$  to  $k + R$

### Syntax

LOAD  $R_o, R, k$

### Operands

$M0 \leq k \leq Mx$

$R0 \leq R_o, R \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 1001	0000 0000	RRRR RRRR	kkkk kkkk
-----------	-----------	-----------	-----------

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.11 LOADR - Load buffer

### Description:

Copys a byte buffer from device at  $R_o^*$  to memory range  $R_d^*$  to  $R_d^* + R$ .

### Operation:

$R_o^* \rightarrow R_d^*$  to  $R_d^* + R$

### Syntax

LOADR  $R_o$ ,  $R$ ,  $R_d$

### Operands

$R0 \leq R_o, R, R_d \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 1010	0000 0000	RRRR RRRR	dddd dddd
-----------	-----------	-----------	-----------

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.12 LOADM - Load buffer

### Description:

Copys a byte buffer from device at  $R_o^*$  to memory range  $Md^*$  to  $Md^* + R$ .

### Operation:

$R_o^* \rightarrow Md^*$  to  $Md^* + R$

### Syntax

LOADM  $R_o$ ,  $R$ ,  $Md$

### Operands

$M0 \leq Md \leq Mx$

$R0 \leq R_o, R \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 1011	0000 0000	RRRR RRRR	dddd dddd
-----------	-----------	-----------	-----------

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

### 4.13 STORE - Store buffer

**Description:**

Copys a byte buffer from memory range  $k$  to  $k + R$  to device at  $Rd^*$ .

**Operation:**

$k$  to  $k + R \rightarrow Rd^*$

**Syntax**

STORE  $k, R, Rd$

**Operands**

$M0 \leq k \leq Mx$

$R0 \leq Ro, R \leq Rx$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0001 1100	kkkk kkkk	RRRR RRRR	dddd dddd
-----------	-----------	-----------	-----------

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.14 STORER - Store buffer

**Description:**

Copys a byte buffer from memory range  $R_0^*$  to  $R_0^* + R$  to device at  $R_d^*$ .

**Operation:**

$R_0^*$  to  $R_0^* + R \rightarrow R_d^*$

**Syntax**

STORER  $R_0, R, R_d$

**Operands**

$R_0 \leq R_0, R, R_d \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0001 1101	0000 0000	RRRR RRRR	dddd dddd
-----------	-----------	-----------	-----------

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

## 4.15 STOREM - Store buffer

### Description:

Copys a byte buffer from memory range  $Mo^*$  to  $Mo^* + R$  to device at  $Rd^*$ .

### Operation:

$Mo^*$  to  $Mo^* + R \rightarrow Rd^*$

### Syntax

STOREM  $Mo$ ,  $R$ ,  $Rd$

### Operands

$M0 \leq k \leq Mx$

$R0 \leq R, Rd \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 1110	0000 0000	RRRR RRRR	dddd dddd
-----------	-----------	-----------	-----------

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.16 POP - Pop

### Description:

Pops a value from the stack into register  $Rd$ .

### Operation:

$S \rightarrow Rd, SP - 4 \rightarrow SP$

### Syntax

POP  $Rd$

### Operands

$R0 \leq Rd \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0000 0101	dddd dddd		
-----------	-----------	--	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.17 PUSH - Push

### Description:

Pushes value  $K$  onto the stack.

### Operation:

$SP + 4 \rightarrow SP, K \rightarrow S$

### Syntax

PUSH  $K$

### Operands

$0 \leq K \leq 2^{32} - 1$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0101	KKKK KKKK		
-----------	-----------	--	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.18 PUSH - Push register

### Description:

Pushes value  $R_0$  onto the stack.

### Operation:

$SP + 4 \rightarrow SP, R_0 \rightarrow S$

### Syntax

PUSH  $R_0$

### Operands

$R_0 \leq R_0 \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0001 0110	0000 0000		
-----------	-----------	--	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.19 ADD - Add

### Description:

Adds value  $K$  and register  $R$  together and stores the result in  $ACC$ .

### Operation:

$K + R \rightarrow ACC$

### Syntax

ADD  $K, R$

### Operands

$0 \leq K \leq 2^{32} - 1$

$R0 \leq R \leq Rx$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0010 0000	KKKK KKKK	RRRR RRRR	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.20 ADDR - Add register

### Description:

Adds register  $R_1$  and register  $R_2$  together and stores the result in ACC.

### Operation:

$$R_1 + R_2 \rightarrow \text{ACC}$$

### Syntax

ADDR  $R_1, R_2$

### Operands

$$R_0 \leq R_1, R_2 \leq R_x$$

### Program counter

$$\text{PC} + 1 \rightarrow \text{PC}$$

### Opcode:

0010 0001	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	
-----------	-------------------	-------------------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.21 SUB - Subtract

### Description:

Subtracts value  $K$  from register  $R$  and stores the result in ACC.

### Operation:

$R - K \rightarrow \text{ACC}$

### Syntax

SUB  $R, K$

### Operands

$0 \leq K \leq 2^{32} - 1$

$R0 \leq R \leq Rx$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 0010	RRRR RRRR	KKKK KKKK	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.22 SUBWR - Subtract register from word

### Description:

Subtracts register  $R$  from value  $K$  and stores the result in ACC.

### Operation:

$K - R \rightarrow \text{ACC}$

### Syntax

SUBWR  $K, R$

### Operands

$0 \leq K \leq 2^{32} - 1$

$R0 \leq R \leq Rx$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 0010	KKKK KKKK	RRRR RRRR	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.23 SUBR - Subtract register

### Description:

Subtracts register  $R_2$  from register  $R_1$  and stores the result in ACC.

### Operation:

$R_1 - R_2 \rightarrow \text{ACC}$

### Syntax

SUBR  $R_1, R_2$

### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R0 \leq R_1, R_2 \leq Rx$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 0011	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	
-----------	-------------------	-------------------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.24 MULT - Multiply

### Description:

Multiplies value  $K$  and register  $R$  together and stores the result in ACC.

### Operation:

$K \times R \rightarrow \text{ACC}$

### Syntax

MULT  $K, R$

### Operands

$0 \leq K \leq 2^{32} - 1$

$R0 \leq R \leq Rx$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 0101	KKKK KKKK	RRRR RRRR	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.25 MULTR - Multiply register

### Description:

Multiplies register  $R_1$  and register  $R_2$  together and stores the result in ACC.

### Operation:

$$R_1 \times R_2 \rightarrow \text{ACC}$$

### Syntax

MULTR  $R_1, R_2$

### Operands

$$R_0 \leq R_1, R_2 \leq R_x$$

### Program counter

$$\text{PC} + 1 \rightarrow \text{PC}$$

### Opcode:

0010 0110	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	
-----------	-------------------	-------------------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.26 DIV - Divide

### Description:

Divides register  $R$  by value  $K$  and stores the result in ACC.

### Operation:

$R \div K \rightarrow \text{ACC}$

### Syntax

DIV  $R, K$

### Operands

$0 \leq K \leq 2^{32} - 1$

$R0 \leq R \leq Rx$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 0111	RRRR RRRR	KKKK KKKK	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.27 DIVWR - Divide word by register

### Description:

Divides value  $K$  by register  $R$  and stores the result in ACC.

### Operation:

$K \div R \rightarrow \text{ACC}$

### Syntax

DIVWR  $K, R$

### Operands

$0 \leq K \leq 2^{32} - 1$

$R0 \leq R \leq Rx$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 1000	KKKK KKKK	RRRR RRRR	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.28 DIVR - Divide registers

### Description:

Divides register  $R_1$  by register  $R_2$  and stores the result in ACC.

### Operation:

$R_1 \div R_2 \rightarrow \text{ACC}$

### Syntax

DIVR  $R_1, R_2$

### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_1, R_2 \leq R_x$

### Program counter

$\text{PC} + 1 \rightarrow \text{PC}$

### Opcode:

0010 1001	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	
-----------	-------------------	-------------------	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

## 4.29 INC - Increment

### Description:

Increments register  $R_d$  by one.

### Operation:

$R_d + 1 \rightarrow R_d$

### Syntax

INC  $R_d$

### Operands

$R_0 \leq R_d \leq R_{31}$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0010 1010	dddd dddd		
-----------	-----------	--	--

### Status register:

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

### 4.30 DEC - Decrement

**Description:**

Decrements register  $R_d$  by one.

**Operation:**

$R_d - 1 \rightarrow R_d$

**Syntax**

DEC  $R_d$

**Operands**

$R_0 \leq R_d \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0010 1011	dddd dddd		
-----------	-----------	--	--

**Status register:**

						<b>O</b>	<b>Z</b>
						x	x

**Z** - Set if the operation results in 0

**O** - Set if the operation overflows

### 4.31 LSF - Left shift

**Description:**

Shifts register  $R_d$  left by  $K$  bits.

**Operation:**

$R_d \ll K \rightarrow R_d$

**Syntax**

LSF  $R_d$ ,  $K$

**Operands**

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_d \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0000	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

### 4.32 LSFR - Left shift by register

**Description:**

Shifts register  $R_d$  left by  $R$  bits.

**Operation:**

$R_d \ll R \rightarrow R_d$

**Syntax**

LSFR  $R_d$ ,  $R$

**Operands**

$R_0 \leq R_d, R \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0001	dddd dddd	RRRR RRRR	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

### 4.33 RSF - Right shift

**Description:**

Shifts register  $Rd$  right by  $K$  bits.

**Operation:**

$Rd \gg K \rightarrow Rd$

**Syntax**

RSF  $Rd, K$

**Operands**

$0 \leq K \leq 2^{32} - 1$

$R0 \leq Rd \leq Rx$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0010	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.34 RSFR - Right shift by register

**Description:**

Shifts register  $R_d$  right by  $R$  bits.

**Operation:**

$R_d \gg R \rightarrow R_d$

**Syntax**

RSFR  $R_d, R$

**Operands**

$R_0 \leq R_d, R \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0011	dddd dddd	RRRR RRRR	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

### 4.35 WLSF - Wrapping left shift

**Description:**

Shifts register  $R_d$  left by  $K$  bits and wraps the bits around.

**Operation:**

$R_d \ll K \rightarrow R_d$

**Syntax**

WLSF  $R_d$ ,  $K$

**Operands**

$0 \leq K \leq 2^{32} - 1$

$R_0 \leq R_d \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0100	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.36 WLSFR - Wrapping left shift by register

**Description:**

Shifts register  $R_d$  left by  $R$  bits and wraps the bits around.

**Operation:**

$R_d \ll R \rightarrow R_d$

**Syntax**

WLSFR  $R_d, R$

**Operands**

$R_0 \leq R_d, R \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0101	dddd dddd	RRRR RRRR	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

### 4.37 WRSF - Wrapping right shift

**Description:**

Shifts register  $R_d$  right by  $K$  bits and wraps the bits around.

**Operation:**

$R_d \gg K \rightarrow R_d$

**Syntax**

WRSF  $R_d, K$

**Operands**

$0 \leq K \leq 2^{32} - 1$

$R_0 \leq R_d \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0110	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.38 WRSFR - wrapping right shift by register

**Description:**

Shifts register  $R_d$  right by  $R$  bits and wraps the bits around.

**Operation:**

$R_d \gg R \rightarrow R_d$

**Syntax**

WRSFR  $R_d, R$

**Operands**

$R_0 \leq R_d, R \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 0111	dddd dddd	RRRR RRRR	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

### 4.39 AND - Bitwise AND

#### Description:

Performs a bitwise AND operation on register  $Rd$  with value  $K$  and stores the result in  $Rd$ .

#### Operation:

$Rd \& K \rightarrow Rd$

#### Syntax

AND  $Rd, K$

#### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R0 \leq Rd \leq Rx$

#### Program counter

$PC + 1 \rightarrow PC$

#### Opcode:

0101 1000	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

#### Status register:

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.40 ANDR - Bitwise AND by register

##### Description:

Performs a bitwise AND operation on register  $R_d$  with register  $R$  and stores the result in  $R_d$ .

##### Operation:

$R_d \& R \rightarrow R_d$

##### Syntax

ANDR  $R_d, R$

##### Operands

$R_0 \leq R_d, R \leq R_x$

##### Program counter

$PC + 1 \rightarrow PC$

##### Opcode:

0101 1001	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

## 4.41 OR - Bitwise OR

### Description:

Performs a bitwise OR operation on register  $R_d$  with value  $K$  and stores the result in  $R_d$ .

### Operation:

$R_d \mid K \rightarrow R_d$

### Syntax

OR  $R_d, K$

### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_d \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0101 1010	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

## 4.42 ORR - Bitwise OR by register

### Description:

Performs a bitwise OR operation on register  $R_d$  with register  $R$  and stores the result in  $R_d$ .

### Operation:

$R_d \mid R \rightarrow R_d$

### Syntax

ORR  $R_d, R$

### Operands

$R_0 \leq R_d, R \leq R_x$

### Program counter

$PC + 1 \rightarrow PC$

### Opcode:

0101 1011	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.43 XOR - Bitwise XOR

##### Description:

Performs a bitwise XOR operation on register  $Rd$  with value  $K$  and stores the result in  $Rd$ .

##### Operation:

$Rd \wedge K \rightarrow Rd$

##### Syntax

XOR  $Rd, K$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R0 \leq Rd \leq Rx$

##### Program counter

$PC + 1 \rightarrow PC$

##### Opcode:

0101 1100	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.44 XORR - Bitwise XOR by register

##### Description:

Performs a bitwise XOR operation on register  $R_d$  with register  $R$  and stores the result in  $R_d$ .

##### Operation:

$R_d \wedge R \rightarrow R_d$

##### Syntax

XORR  $R_d, R$

##### Operands

$R_0 \leq R_d, R \leq R_x$

##### Program counter

$PC + 1 \rightarrow PC$

##### Opcode:

0101 1101	dddd dddd	KKKK KKKK	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.45 NOT - Not

**Description:**

Flips the bits of register  $R_d$ .

**Operation:**

$\sim R_d \rightarrow R_d$

**Syntax**

NOT  $R_d$

**Operands**

$R_0 \leq R_d \leq R_x$

**Program counter**

$PC + 1 \rightarrow PC$

**Opcode:**

0101 1110	dddd dddd		
-----------	-----------	--	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	x

**Z** - Set if the operation results in 0

#### 4.46 BRBS - Branch if bit set

##### Description:

If the  $s_b$  bit in the SR is set, branch to absolute address  $k$ .

##### Operation:

If  $SR(S_b) = 1$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRBS  $S_b$ ,  $k$

##### Operands

$M0 \leq k \leq Mx$

$S0 \leq S_b \leq Sx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0011 0000	bbbb bbbb	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.47 BRBC - Branch if bit clear

##### Description:

If the  $s_b$  bit in the SR is clear, branch to absolute address  $k$ .

##### Operation:

If  $SR(S_b) = 0$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRBC  $S_b, k$

##### Operands

$M0 \leq k \leq Mx$

$S0 \leq S_b \leq Sx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0011 0001	bbbb bbbb	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.48 BREQ - Branch if equal

**Description:**

If  $K$  is equal to ACC, branch to absolute address  $k$ .

**Operation:**

If  $ACC = K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

**Syntax**

BREQ  $K, k$

**Operands**

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

**Program counter**

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

**Opcode:**

0011 0010	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.49 BREQR - Branch if equal register

##### Description:

If R is equal to ACC, branch to absolute address k.

##### Operation:

If ACC = R then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BREQR R, k

##### Operands

$M0 \leq k \leq Mx$

$R0 \leq R \leq Rx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0011 0011	RRRR RRRR	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.50 BREQRW - Branch if equal register and word

##### Description:

If  $K$  is equal to  $R$ , branch to absolute address  $k$ .

##### Operation:

If  $R = K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BREQRW  $R, K, k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

$$R0 \leq R \leq Rx$$

##### Program counter

$$k \rightarrow PC$$

$$PC + 1 \rightarrow PC$$

##### Opcode:

0011 0100	RRRR RRRR	KKKK KKKK	kkkk kkkk
-----------	-----------	-----------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.51 BREQRR - Branch if equal registers

##### Description:

If  $R_1$  is equal to  $R_2$ , branch to absolute address  $k$ .

##### Operation:

If  $R_1 = R_2$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BREQRR  $R_1, R_2, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R0 \leq R_1, R_2 \leq Rx$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0011 0101	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	kkkk kkkk
-----------	-------------------	-------------------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.52 BRNQ - Branch if not equal

### Description:

If  $K$  is not equal to  $ACC$ , branch to absolute address  $k$ .

### Operation:

If  $ACC \neq K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

### Syntax

BRNQ  $K, k$

### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

### Opcode:

0011 0110	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.53 BRNQR - Branch if not equal register

##### Description:

If R is not equal to ACC, branch to absolute address k.

##### Operation:

If  $ACC \neq R$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRNQR R, k

##### Operands

$M0 \leq k \leq Mx$

$R0 \leq R \leq Rx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0011 0111	RRRR RRRR	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.54 BRNQRW - Branch if not equal register and word

##### Description:

If  $K$  is not equal to  $R$ , branch to absolute address  $k$ .

##### Operation:

If  $R \neq K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRNQRW  $R, K, k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

$$R0 \leq R \leq Rx$$

##### Program counter

$$k \rightarrow PC$$

$$PC + 1 \rightarrow PC$$

##### Opcode:

0011 1000	RRRR RRRR	KKKK KKKK	kkkk kkkk
-----------	-----------	-----------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.55 BREQRR - Branch if not equal registers

##### Description:

If  $R_1$  is not equal to  $R_2$ , branch to absolute address  $k$ .

##### Operation:

If  $R_1 \neq R_2$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRNQRR  $R_1, R_2, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R0 \leq R_1, R_2 \leq Rx$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0011 1001	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	kkkk kkkk
-----------	-------------------	-------------------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.56 BRLT - Branch if less than

##### Description:

If ACC is less than  $K$ , branch to absolute address  $k$ .

##### Operation:

If  $ACC < K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLT  $K, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $M0 \leq k \leq Mx$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0011 1010	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.57 BRLTR - Branch if less than register

##### Description:

If ACC is less than R, branch to absolute address k.

##### Operation:

If  $ACC < R$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTR R, k

##### Operands

$M0 \leq k \leq Mx$

$R0 \leq R \leq Rx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0011 1011	RRRR RRRR	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.58 BRLTRW - Branch if less than register and word

##### Description:

If  $R$  is less than  $K$ , branch to absolute address  $k$ .

##### Operation:

If  $R < K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTRW  $R$ ,  $K$ ,  $k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

$$R0 \leq R \leq Rx$$

##### Program counter

$$k \rightarrow PC$$

$$PC + 1 \rightarrow PC$$

##### Opcode:

0011 1100	RRRR RRRR	KKKK KKKK	kkkk kkkk
-----------	-----------	-----------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.59 BRLTRR - Branch if less than registers

##### Description:

If  $R_1$  is less than  $R_2$ , branch to absolute address  $k$ .

##### Operation:

If  $R_1 < R_2$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTRR  $R_1, R_2, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_1, R_2 \leq R_x$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0011 1101	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	kkkk kkkk
-----------	-------------------	-------------------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.60 BRGT - Branch if greater than

**Description:**

If ACC is greater than K, branch to absolute address k.

**Operation:**

If  $ACC > K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

**Syntax**

BRGT K, k

**Operands**

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

**Program counter**

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

**Opcode:**

0011 1110	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.61 BRGTR - Branch if greater than register

**Description:**

If ACC is greater than R, branch to absolute address k.

**Operation:**

If  $ACC > R$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

**Syntax**

BRGTR R, k

**Operands**

$M0 \leq k \leq Mx$

$R0 \leq R \leq Rx$

**Program counter**

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

**Opcode:**

0011 1111	RRRR RRRR	kkkk kkkk	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.62 BRGTRW - Branch if greater than register and word

##### Description:

If  $R$  is greater than  $K$ , branch to absolute address  $k$ .

##### Operation:

If  $R > K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRGTRW  $R$ ,  $K$ ,  $k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

$$R0 \leq R \leq Rx$$

##### Program counter

$$k \rightarrow PC$$

$$PC + 1 \rightarrow PC$$

##### Opcode:

0100 0000	RRRR RRRR	KKKK KKKK	kkkk kkkk
-----------	-----------	-----------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.63 BRGTRR - Branch if greater than registers

##### Description:

If  $R_1$  is greater than  $R_2$ , branch to absolute address  $k$ .

##### Operation:

If  $R_1 > R_2$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRGTRR  $R_1, R_2, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_1, R_2 \leq R_x$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0100 0001	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	kkkk kkkk
-----------	-------------------	-------------------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.64 BRLTE - Branch if less than or equals

##### Description:

If ACC is less than or equals  $K$ , branch to absolute address  $k$ .

##### Operation:

If  $ACC \leq K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTE  $K, k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0100 0010	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.65 BRLTER - Branch if less than or equals register

##### Description:

If ACC is less than or equals R, branch to absolute address k.

##### Operation:

If  $ACC \leq R$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTER R, k

##### Operands

$M0 \leq k \leq Mx$

$R0 \leq R \leq Rx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0100 0011	RRRR RRRR	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.66 BRLTERW - Branch if less than or equals register and word

##### Description:

If  $R$  is less than or equals  $K$ , branch to absolute address  $k$ .

##### Operation:

If  $R \leq K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTERW  $R, K, k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

$$R0 \leq R \leq Rx$$

##### Program counter

$$k \rightarrow PC$$

$$PC + 1 \rightarrow PC$$

##### Opcode:

0100 0100	RRRR RRRR	KKKK KKKK	kkkk kkkk
-----------	-----------	-----------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.67 BRLTERR - Branch if less than or equals registers

##### Description:

If  $R_1$  is less than or equals  $R_2$ , branch to absolute address  $k$ .

##### Operation:

If  $R_1 \leq R_2$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRLTERR  $R_1, R_2, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_1, R_2 \leq R_x$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0100 0101	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	kkkk kkkk
-----------	-------------------	-------------------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.68 BRGTE - Branch if greater than or equals

**Description:**

If ACC is greater than or equals  $K$ , branch to absolute address  $k$ .

**Operation:**

If  $ACC \geq K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

**Syntax**

BRGTE  $K, k$

**Operands**

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

**Program counter**

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

**Opcode:**

0100 0110	KKKK KKKK	kkkk kkkk	
-----------	-----------	-----------	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.69 BRGTER - Branch if greater than or equals register

##### Description:

If ACC is greater than or equals R, branch to absolute address k.

##### Operation:

If  $ACC \geq R$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRGTER R, k

##### Operands

$M0 \leq k \leq Mx$

$R0 \leq R \leq Rx$

##### Program counter

$k \rightarrow PC$

$PC + 1 \rightarrow PC$

##### Opcode:

0100 0111	RRRR RRRR	kkkk kkkk	
-----------	-----------	-----------	--

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.70 BRGTERW - Branch if greater than or equals register and word

##### Description:

If  $R$  is greater than or equals  $K$ , branch to absolute address  $k$ .

##### Operation:

If  $R \geq K$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRGTERW  $R, K, k$

##### Operands

$$0 \leq K \leq 2^{32} - 1$$

$$M0 \leq k \leq Mx$$

$$R0 \leq R \leq Rx$$

##### Program counter

$$k \rightarrow PC$$

$$PC + 1 \rightarrow PC$$

##### Opcode:

0100 1000	RRRR RRRR	KKKK KKKK	kkkk kkkk
-----------	-----------	-----------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

#### 4.71 BRGTERR - Branch if greater than or equals registers

##### Description:

If  $R_1$  is greater than or equals  $R_2$ , branch to absolute address  $k$ .

##### Operation:

If  $R_1 \geq R_2$  then  $k \rightarrow PC$  else  $PC + 1 \rightarrow PC$

##### Syntax

BRGTERR  $R_1, R_2, k$

##### Operands

$0 \leq K \leq 2^{32} - 1$   
 $R_0 \leq R_1, R_2 \leq R_x$

##### Program counter

$k \rightarrow PC$   
 $PC + 1 \rightarrow PC$

##### Opcode:

0100 1001	$R_1 R_1 R_1 R_1$	$R_2 R_2 R_2 R_2$	kkkk kkkk
-----------	-------------------	-------------------	-----------

##### Status register:

						<b>O</b>	<b>Z</b>
						-	-

## 4.72 JMP - Jump

### Description:

Jump to absolute address  $k$ .

### Operation:

$k \rightarrow \text{PC}$

### Syntax

JMP  $k$

### Operands

$M0 \leq k \leq Mx$

### Program counter

$k \rightarrow \text{PC}$

### Opcode:

0000 0001	kkkk kkkk		
-----------	-----------	--	--

### Status register:

						<b>O</b>	<b>Z</b>
						-	-

### 4.73 CALL - Call subroutine

**Description:**

Push SF onto the stack and jump to absolute address k.

**Operation:**

SF  $\rightarrow$  PC, k  $\rightarrow$  PC

**Syntax**

CALL k

**Operands**

$M0 \leq k \leq Mx$

**Program counter**

k  $\rightarrow$  PC

**Opcode:**

0000 0010	kkkk kkkk		
-----------	-----------	--	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.74 CALLR - Call subroutine from register

**Description:**

Push SF onto the stack and jump to absolute address R.

**Operation:**

SF → PC, R → PC

**Syntax**

CALLR R

**Operands**

$R0 \leq R \leq Rx$

**Program counter**

k → PC

**Opcode:**

0000 0011	RRRR RRRR		
-----------	-----------	--	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-

#### 4.75 RET - Return from subroutine

**Description:**

Pop SF from stack and return from subroutine.

**Operation:**

SF → R0 to Rx, SF → PC

**Syntax**

RET

**Operands**

None

**Program counter**

SF → PC

**Opcode:**

0000 0100			
-----------	--	--	--

**Status register:**

						<b>O</b>	<b>Z</b>
						-	-
